

Facial Treatments

Do you wish your lines were a thing of the past?

Here at Stoke Bishop Dental Centre we constantly develop our treatment options to help our clients achieve the results that they want. We are very pleased to be able to offer facial treatments along side our high quality dental treatments.

Both muscle relaxants and dermal fillers are available.

We use our facial muscles repeatedly throughout our lifetime. This causes our skin to crease in areas of greatest use. As we age the production of collagen and elastin in our skin slows down, reducing its natural elasticity. As a result, these areas of overuse become damaged and the resulting creases and lines become permanent.

Muscle relaxants

By reducing the movement of your facial muscles in these areas your skin stops being creased, causing your lines to soften or even fade away. Muscle relaxants (such as Botox®) do just that. They stop/reduce your muscle/s function by blocking neuromuscular transmission – it stops chemical messages travelling from your nerves to your muscles. In the areas treated, the muscles are temporarily inactivated resulting in crease reduction, and whilst the muscles are temporarily inactivated you can break the subconscious habit of overusing these muscles.

- Muscle relaxants smooth out lines by temporarily inactivating your facial muscles.
- Results are visible in days and can last for 3-4 months following initial treatment. Subsequent treatments may last much longer.

Dermal fillers

Fillers are gels made of hyaluronic acid (HA), a naturally occurring substance in our skin that helps to hydrate and adds volume. It smoothes away facial wrinkles and folds and restores the skin's volume; it can also be used to redefine lips.

- Add volume
- Uses naturally occurring substances which hydrate the skin. Results visible immediately
